

Stop the Insanity – *the green way to print PowerPoint slides*

Many of you are diligently printing the PP slides that your professors post on TWEN or other course sites. Most of these printouts consist of multiple pages of bulleted talking points on dark backgrounds that make for easy viewing in class.

Printing these, however, uses an incredible amount of toner and paper.

Try one of the following solutions:

1. Change the background of the show to white and the text to black, and print multiple slides per page. . .

2. Print the Outline Version. This 10 slide Power Point show became a 3 page outline !!!
